Checking discrepancies

Johanna Jantzen

November 18, 2020

Etienne download versus my fulcrum download differences

```
## knitr
```

```
## spectrolab
```

```
## tidyr
```

```
## dplyr
```

```
## lubridate
```

```
## reshape2
```

Checking for differences in my and Etienne's metadata

```
## knitr
```

```
## spectrolab
```

```
## tidyr
```

```
## dplyr
```

```
## lubridate
```

```
## reshape2
```

Mine is missing 461 and Etienne's is missing 0 samples

```
## knitr
```

```
## spectrolab
```

```
## tidyr
```

```
## dplyr
```

```
## lubridate
```

```
## reshape2
```

Now to compare Etienne's data with the spectral data

```
## knitr
```

```
## spectrolab
```

```
## tidyr
```

```
## dplyr
```

```
## lubridate
```

```
## reshape2
```

It seems that the main issues (now that I have Etienne's data with more of the discrepancies resolved), is that the metadata is missing for the 2017-Dessain-MSc project. For the data availble for me (Johanna) to download from the Fulcrum website, there was more information missing compared to the spectral data, including for samples from 8 projects (with all of the 2019-Pardo project missing), and including samples without species IDs in Shan's spectral data.
